

## HEALTH MEASURES IN NOSY BE

If the passenger's temperature is high  $\geq 38^\circ$ , she/he will have to go through secondary screening, i.e. a doctor will consult him.

Secondary screening includes :

- A second measurement of the passenger's temperature after 10 minutes of rest;
- A targeted medical examination to determine if the passenger presents a real risk of being affected by COVID 19 or has been exposed to COVID 19;
- If the passenger's temperature is  $< 38^\circ$ , or if the passenger suffers from a medical condition other than COVID 19, the passenger will be allowed to continue his/her journey after receiving a symptomatic treatment.
- If the passenger's temperature persists at  $\geq 38^\circ$  and/or if she/he presents a real risk of being affected by COVID 19, or has been exposed to COVID 19, the passenger will not be allowed to continue his/her journey and will be referred to the District Reference Hospital (CHRD 2).

A PCR test costs approximately 100,000 Ariary or about 25 Euros.

For hotels located on islands near Nosy Be, the staff of the Ministry of Public Health ensures the on-site testing of their clients according to the situation on the field.

Training is mandatory for all persons authorized to perform the tests.

The tests must be sent to the laboratory of the CHRD of Nosy Be.

In Nosy Be, PCR tests are available at the CHRD level. Other Specific points will also be dedicated for testing and mobile sampling teams will be available.

The 72 hour PCR test before the date of return is not mandatory for passengers wishing to return to a country not requiring a PCR.
